

Cz2Tg/+ (AB) (CZRC catalog ID: CZ74)

Nature of the mutation

Cz2Tg Is generated by random integration of a fusion GFP-containing construct. This line expresses GFP under control of the T cell-specific tyrosine kinase (lck) promoter (Langenau, Ferrando et al. 2004).

Genotyping assay

1. Genotyping of the *cz2Tg* allele is based on the fluorescent microscope. As identified by fluorescent microscope, the GFP fluorescence signal is detectable at 5 dpf.

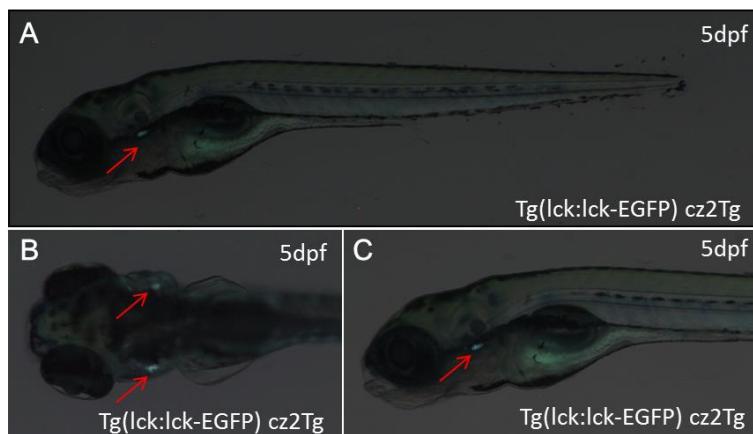

Figure. The *cz2Tg* line expresses GFP in the thymus at 5 dpf.

The figure shows the lateral view (A and C) and dorsal view (B) of *cz2Tg* embryos at 5 dpf.

2. Genotyping of the *cz2Tg* line can also be performed via allele-specific PCR using eGFP-specific primers (Sense primer: GTAAACGGCCACAAGTTCAAG, antisense primer CTCGTTGGGGCTTTGCT, the length of PCR fragment is 576 bp).
